

1. Difference Between App, Object, Record, and Field

App

An App is a collection of objects and tools used for one purpose.

Example: College Management App.

Object

An Object stores similar type of data.

Example: Student Object.

Record

A Record is one complete entry inside an object.

Example: One student details.

Field

A Field stores single information.

Example: Name, Phone Number, Roll No.

2. Standard vs Custom Objects

Standard Objects

Objects already provided by Salesforce.

Examples: Account, Contact.

Custom Objects

Objects created by users based on needs.

Examples: Student, Faculty.

3. College Data Model

Objects

- Student
- Faculty
- Course
- Attendance

Relationships

- Faculty teaches Course
- Student joins Course
- Student has Attendance

Diagram

Faculty → Course → Student → Attendance

4. Formula Fields

Formula Fields automatically calculate values.

Example

Subject1 + Subject2 + Subject3

Used to calculate Total Marks or Percentage automatically

5. Validation Rules

Validation Rules check whether entered data is correct.

Example

- Phone number must be 10 digits
- Marks should not exceed 100

They help avoid wrong data.

6. Reflection

Structured enterprise data helps companies organize information properly.
It improves accuracy, saves time, reduces mistakes, and makes work easier.

Salesforce helps businesses manage data efficiently.
