

1. Why Testing Matters

Testing helps to find bugs in the application.
It makes sure the system works properly before users use it.

2. What is Asynchronous Apex?

Asynchronous Apex runs tasks in the background.
It is useful for large tasks that take more time.

3. What is Salesforce DX?

Salesforce DX is a tool for developers.
It helps in writing, testing, and deploying code easily.

4. Complete System Workflow

First, developers create the application.
Then they test the code.
After that, they fix errors.
Finally, they deploy the application for users.

5. Important Test Cases

- Check login functionality
- Check record creation
- Check data validation
- Check background job execution

6. Reflection

Enterprise software needs structured workflows to avoid errors, save time, and improve teamwork.
