

What is Salesforce DX?

- **New Tools:** A collection of tools that help people build apps on Salesforce.
- **The Rules:** Instead of saving work only on the website, it saves everything as code files.
- **Quick Orgs:** It lets you make temporary, clean testing areas called "Scratch Orgs."
- **Main Goal:** It makes building, testing, and sending updates much faster and safer.

Why CLI Matters

- **No Clicking:** It is a tool where you type text commands instead of clicking buttons.
- **Auto Work:** It lets computers do boring, repetitive tasks automatically.
- **Speed:** It saves time by doing big tasks with one short command.
- **Connection:** It helps Salesforce talk to other popular developer tools.

Why GitHub Matters

- **Safe Storage:** It is a website that holds the official, final version of your project code.
- **History Book:** It remembers every single change and who made it.
- **Fixing Mistakes:** It lets you easily go back to an older version if something breaks.
- **Team Checks:** It lets teammates look over your work before adding it to the main project.

Team Collaboration Problems

- **Erasing Work:** Two developers might change the same thing and accidentally delete each other's work.
- **No Vision:** Team members cannot easily see what other people are working on.
- **Broken Apps:** One person's changes might accidentally break another person's features.
- **Confusion:** It is hard to know exactly who changed what inside the system.

Enterprise Workflow Discussion

- **Organized Paths:** Teams use separate "lanes" for testing new ideas before putting them live.
- **Step-by-Step:** Code moves safely from private test areas to final business areas.
- **Auto Testing:** Computers test the code automatically to find errors early.
- **Rules:** Strict approval steps ensure nobody breaks the live system that customers use.

Reflection

- **Better Way:** Moving away from old methods prevents bad mistakes during updates.
- **New Habits:** Teams must learn to save everything as files instead of just clicking settings.
- **Good Results:** It helps businesses give users new features quickly and without bugs.
